

Highlights of Activities: EF05

Michael Begel
Stefan Hoeche
Michael Schmitt

Topics covered by the group

- **Strong Coupling**
- **Precision tests of the Standard Model**
- **Parton Distributions [With EF06]**
- **Overlap between HL-LHC and EIC [With EF06/EF07]**
- **Perturbative calculations - Fixed order & Resummation**
- **Simulation and MC event generators**
- **Non-perturbative aspects**
- **Jet substructure**

Joint Kickoff Meeting on QCD at the Energy Frontier

- ***EF05 (pQCD) / EF06 (PDF) / EF07 (HI) meeting on June 1***

- <https://indico.fnal.gov/event/43488/>
- well attended by all three communities

- ***Four excellent summary talks***

- Dimitri Denisov on Accelerator Developments
- Abhay Deshpande on Electron-Ion Collider
- Gavin Salam on European Strategy Update
- Joey Huston on Snowmass 2013

- ***This was an excellent combined forum with the three QCD task groups***

- Inspiring discussions on physics connections between LHC and EIC
- Discussions on forward and diffractive physics

Joint EF05 / EF06 / EF07 Topical Group Meeting		
Monday Jun 1, 2020, 8:55 AM → 11:30 AM US/Central		
Zoom connection II...		
8:55 AM → 9:00 AM	Introduction	Speakers: Michael Begel (Brookhaven National Lab), Stefan Hoeche (Fermilab), Yen-Jie Lee (Massachusetts Institute of Technology), Huey-Min (MSU), Swagato Mukherjee (BNL), Pavel Nadolsky (Southern Methodist University), Christophe Royon (University of Kansas), Michael Schmitt (Northwestern University)
9:00 AM → 9:30 AM	Accelerator Developments	Speakers: Dimitri Denisov (BNL), Dimitri Denisov (BNL) Snowmass_Future_...
9:30 AM → 10:00 AM	Electron Ion Collider	Speaker: Abhay Deshpande (Stony Brook University) EIC-at-SnowMass2...
10:00 AM → 10:30 AM	Physics Input to European Strategy Update	Speaker: Gavin Salam (CERN) ESPP-QCD-overview...
10:30 AM → 11:00 AM	Lessons from Snowmass 2013	Speakers: John Campbell (Fermilab), Joey Huston (Michigan State University) Snowmass_EF05_E...
11:00 AM → 11:30 AM	Discussion	Topics for joint EF05, EF06 and EF07 meetings and organization

QCD theory anticipated / needed for full exploitation of HL-LHC

(2) General purpose Monte Carlo event-generator tools

- Perturbative improvements for Matching and Merging (e.g. generalisation of approaches for parton shower + NNLO merging,)
- Understanding & exploiting relation between parton-shower algorithms and resummation
- Phenomenological Models (hadronisation, underlying event, **also connects with HI physics, neutrino programmes, low energy QCD, various “beyond colliders” experiments, cosmic-ray physics**)

Salam

Question 1c

- Survey of the importance of EWK corrections. Do we need an EWK wishlist similar to the now-defunct NLO QCD one
- Where are combined QCD-EWK corrections important?
 - EWK corrections important for many of the kinematic regions at the LHC, both current and to be expected with 4000 fb⁻¹ it's what Kalanand Mishra in 2013 called “the Sudakov Zone”
- Even more so for 33 or 100 TeV
- QCD and EWK corrections can be of equal importance
- See later discussion of Les Houches wishlist

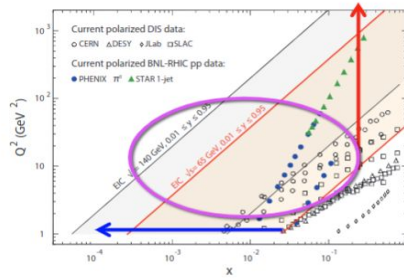

Huston

06/01/2020

Electron Ion Collider

9

EIC: Kinematic reach & properties

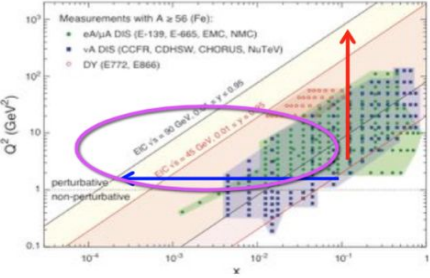

For e-N collisions at the EIC:

- ✓ Polarized beams: e, p, d/³He
- ✓ Variable center of mass energy
- ✓ Wide Q² range → evolution
- ✓ Wide x range → spanning valence to low-x physics

For e-A collisions at the EIC:

- ✓ Wide range in nuclei
- ✓ Luminosity per nucleon same as e-p
- ✓ Variable center of mass energy
- ✓ Wide x range (evolution)
- ✓ Wide x region (reach high gluon densities)

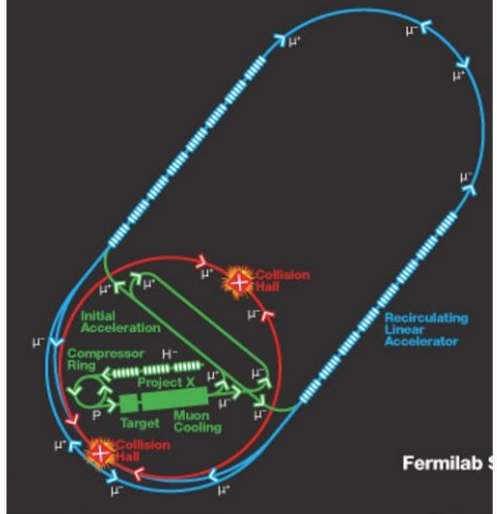

Deshpande

μ⁺μ⁻ Colliders

- Muons are “heavy electrons”, they have low synchrotron radiation making circular accelerators viable for multi TeV energies
 - γ factor at the same energy is ~200 times less than for electrons
- Muons are unstable with life-time of 2.2 micro seconds
 - Decay to an electron and a pair of neutrinos
- Main accelerator challenge
 - To make large number of muons quickly and then “cool” them to focus into small diameter beam to collide
- Another issue are decays and irradiation by electrons from muon decays
 - And neutrinos irradiation!

2x2 TeV

Denisov

U.S. DEPARTMENT OF ENERGY

BROOKHAVEN NATIONAL LABORATORY

Focus questions

1. **What is the ultimate precision for α_s and how do we achieve it?**
LHC, future pp/e+e-/DIS (ep and eA), particle decays (τ , hadrons), lattice
2. **What theoretical developments are needed to support precision measurements of Higgs and top quark production and properties?**
including electroweak corrections, threshold effects, non-perturbative, ...
3. **Evaluation and interplay of uncertainties from theory and experiment**
fixed-order/resummation scales, non-perturbative effects, etc.
4. **Can we better quantify non-perturbative uncertainties?**
in cross-cutting effort between experiments, MC community & lattice QCD
5. **How to include more higher-order QCD in MC event generators?**
Fixed-order and parton shower development (incl EW emissions, color flow, multi-parton interactions, rescattering, scale choices, ...)
6. **[Together with EF06] What is the future of PDF determination?**
From the LHC, DIS, theoretical developments (NNLO, photon, pion, ...)

Discussions on α_s

- **Joint EF05 (pQCD) / EF06 (PDF) meeting on June 30**

- <https://indico.fnal.gov/event/43490/>
- well attended by both communities

- **Four excellent summary talks**

- Klaus Rabbertz on α_s determination at the LHC
- Peter Petreczky on α_s from the lattice
- David d'Enterria on α_s in e^+e^- collisions
- Daniel Britzger on α_s in DIS at the LHeC

- **Much discussion on improvements at existing and future machines**

- Requirements on theory progress
- Hadronization uncertainties
- New projections for LHeC

The screenshot displays the agenda for the 'Joint EF05 / EF06 Topical Group Meeting' held on Tuesday, June 30, 2020, from 9:00 AM to 11:30 AM in the US/Central time zone. The agenda is structured as follows:

- 9:00 AM → 9:30 AM: α_s determination at the LHC**
Speaker: Klaus Rabbertz (ETP, KIT, Karlsruhe, Germany)
Attachment: Snowmass_Topical...
- 9:30 AM → 10:00 AM: Current status of α_s determination from the lattice**
Speaker: Peter Petreczky (Brookhaven National Lab)
Attachment: snowmass20.pdf
- 10:00 AM → 10:30 AM: Future α_s determinations at e^+e^- collisions**
Speaker: David d'Enterria (CERN)
Attachment: dde_alphas_FCee...
- 10:30 AM → 11:00 AM: α_s determination in DIS at the LHeC**
Speaker: Daniel Britzger (Max Planck Institute)
Attachment: 200630-britzger-LH...
- 11:00 AM → 11:30 AM: Discussion**

Running of $\alpha_s(Q)$

Perform fits in fixed intervals of the chosen scale Q

Jet cross sections and ratios

Rabbertz

Needs an update for latest ATLAS, CMS, & H1

Klaus Rabbertz

Summary: α_s at FCC-ee

- World-average QCD coupling at N^{2,3}LO today:
 - Determined from 7 observables with combined 0.85% uncertainty (least well-known gauge coupling).
 - Impacts all LHC QCD x-sections & decays.
 - Role beyond SM: GUT, EWK vacuum stability, New colored sectors?

e^+e^- extractions:

- Hadronic tau decays: $\pm 1\%$ TH
- Event shapes, jet rates: $\pm 1\%$ TH
- Z&W pseudo-observ.: $\pm 0.1\%$ TH

State-of-the-art extractions:

- Z boson: New fit with high-order EW corrections + updated LEP data: $\sim 2.2\%$ (exp.) uncertainty today.
- New N³LO fit to Γ_W , R_W $\sim 2.2\%$ (exp.) uncertainty today.

d'Enterria

- Permil uncertainty only p with a machine like FCC

Summary of α_s from the lattice

Petreczky

Form pre-averages for each of the quantities and estimate the errors to account the spread in the determinations from different lattice groups. Averaging over pre-averages gives:

$$\alpha_s(M_Z) = 0.11803^{+0.00047}_{-0.00068}, \quad \frac{\chi^2}{df} = \frac{6.5}{6}$$

w/o static pot. :

$$\alpha_s(M_Z) = 0.11838^{+0.00044}_{-0.00048}, \quad \frac{\chi^2}{df} = \frac{2.8}{5}$$

w/o Dirac eig. :

$$\alpha_s(M_Z) = 0.11802^{+0.00046}_{-0.00069}, \quad \frac{\chi^2}{df} = \frac{4.8}{5}$$

w/o step scaling :

$$\alpha_s(M_Z) = 0.11791^{+0.00054}_{-0.00069}, \quad \frac{\chi^2}{df} = \frac{6.4}{6}$$

Summary of α_s at LHeC

Britzger

LHeC is an ideal QCD laboratory

- LHeC connects low-scale to Z-pole and beyond with high experimental precision

Inclusive NC/DIS

→ 'indirect' determination from QCD dynamics

$$\Delta\alpha_s(M_Z)(\text{incl. DIS}) = \pm 0.00022_{(\text{exp+PDF})}$$

Inclusive jet cross sections

→ α_s from direct measurement of a QCD-jet

$$\Delta\alpha_s(M_Z)(\text{jets}) = \pm 0.00013_{(\text{exp})} \pm 0.00010_{(\text{PDF})}$$

Taking jet data and inclusive DIS data

$$\Delta\alpha_s(M_Z)(\text{incl. DIS \& jets}) = \pm 0.00018_{(\text{exp+PDF})}$$

→ pQCD theory may be the limiting factor for ultimate precision for α_s

Discussions on perturbative uncertainties in MC simulations

- ***EF05 (pQCD) meeting on July 17***

- <https://indico.fnal.gov/event/44315/>
- attended by many experts

- ***Three excellent summary talks***

- Simone Amoroso on ATLAS perspective
- Saptaparna Bhattacharya on CMS perspective
- Marek Schönherr on theory perspective

- ***Stimulating discussion on proper uncertainty estimates***

- Interpretation of scale uncertainties
- Scale uncertainties in parton showers
- Uncertainties in matching/merging procedures
- Question on identified particle production

Joint EF05 / EF06 Topical Group Meeting		
Tuesday Jun 30, 2020, 9:00 AM → 11:30 AM US/Central

TOP-17-

RESUMMATION (SHOWER)

Amoroso

* Parton shower perturbative uncertainties are often a dominant source of uncertainty

- For top and DY precision measurements we still rely on NLO+PS samples for an accurate description of inclusive quantities and uncertainties in the resummation region are (large and) important
- NLO-merged samples often do not provide a good description of inclusive quantities (can this be fixed?) hence cannot/are not used

STDM-2018-14

... and how to estimate them

Parametric uncertainties

- assess through variation of input parameters within limits given by existing data

Perturbative uncertainties

- use that full result must be independent of scale choices: renormalisation & factorisation scales resummation scales / profile scales / ...
→ can always only capture scale-dependent terms, never scale-independent ones

Algorithmic uncertainties

- implement different algorithms
→ always a discrete variation
→ tricky as algorithm development takes up the majority of the time

Modelling uncertainties

- if we knew how physics works in this regime ...

Schönherr

Upcoming: Mini-workshop on non-perturbative uncertainties

- ***EF05 (pQCD) will hold two meetings, Aug 3 & 4, 9am-12pm CDT***
 - <https://indico.fnal.gov/event/44316/>
- ***We will have talks by experts on experiment, theory and MC simulation***
 - Torbjörn Sjöstrand - String Fragmentation
 - Frank Krauss - Cluster Fragmentation
 - Luigi del Debbio - Lattice perspective
 - Peter Loch - ATLAS/CMS perspective
 - Florian Bernlochner - Belle II perspective
 - ...
- ***We're looking forward to seeing you at the meeting, and to interesting and stimulating discussions***

Thank you for participating in the EF05 activities!

**Please send us suggestions for study or meeting topics,
comments, expressions of interest, LOIs, ...**
